DETAILED ACTION

Specification

Content of Specification

- (a) <u>Title of the Invention</u>: See 37 CFR 1.72(a) and MPEP § 606. The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention should be brief but technically accurate and descriptive, preferably from two to seven words may not contain more than 500 characters.
- (b) <u>Cross-References to Related Applications</u>: See 37 CFR 1.78 and MPEP § 201.11.
- (c) <u>Statement Regarding Federally Sponsored Research and Development:</u> See MPEP § 310.
- (d) Incorporation-By-Reference Of Material Submitted On a Compact Disc:
 The specification is required to include an incorporation-by-reference of electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application. See 37 CFR 1.52(e) and MPEP § 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text were permitted as electronic documents on compact discs beginning on September 8, 2000.
 - Or alternatively, Reference to a "Microfiche Appendix": See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.
- (e) <u>Background of the Invention</u>: See MPEP § 608.01(c). The specification should set forth the Background of the Invention in two parts:
 - (1) Field of the Invention: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of the subject matter of the claimed invention. This item may also be titled "Technical Field."
 - (2) <u>Description of the Related Art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98</u>: A description of the related art known to the applicant and including, if applicable, references to

Application/Control Number: 10/645,044

Art Unit: 3641

specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."

Page 3

- or general statement of the invention: See MPEP § 608.01(d). A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.
- (g) <u>Brief Description of the Several Views of the Drawing(s)</u>: See MPEP § 608.01(f). A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.
- (h) Detailed Description of the Invention: See MPEP § 608.01(g). A description of the preferred embodiment(s) of the invention as required in 37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.
- (i) Claim or Claims: See 37 CFR 1.75 and MPEP § 608.01(m). The claim or claims must commence on separate sheet or electronic page (37 CFR 1.52(b)(3)). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP § 608.01(i)-(p).
- (j) Abstract of the Disclosure: See MPEP § 608.01(f). A brief narrative of the disclosure as a whole in a single paragraph of 150 words or less commencing on a separate sheet following the claims. In an international application which has entered the national stage (37 CFR 1.491(b)), the

applicant need not submit an abstract commencing on a separate sheet if an abstract was published with the international application under PCT Article 21. The abstract that appears on the cover page of the pamphlet published by the International Bureau (IB) of the World Intellectual Property Organization (WIPO) is the abstract that will be used by the USPTO. See MPEP § 1893.03(e).

An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

Applicant is advised of the availability of the publication "Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office." This publication is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The disclosure is objected to because of the following informalities: parts of the text seem to be misplaced: for example, the two paragraphs preceding the "brief description of the drawings" section are out of place and there appears to be text missing after the first paragraph of the "detailed description of the invention and drawings" section.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. For example, there is no clear discussion of the method of operation, interrelation of parts, or functions of each of the parts. Further:

- There is no discussion whatsoever in the specification as to how to incorporate the apparatus into an airplane, which is claimed. This configuration is not readily apparent to one skilled in the art because an airplane presents additional problems of implementation, such as the problem of a laterally ejecting seat having to clear the wing of an airplane.
- There is no support in the specification for the claimed "one-hundred sixty-eight circumventing roller trucks" or "a monorail supporting track with eighty-four roller trucks." Further, even if the claimed number of roller trucks were disclosed in the specification, there is no discussion of how that quantity of roller trucks would be incorporated into the system.

Claims 1-20 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are replete with indefinite and functional or operational language.

The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited. The following is only exemplary of some of the problems of indefiniteness and is not meant to be inclusive of all of the problems in the claim that should be corrected:

- The language in claim 1 "shown here as a helicopter" is unclear since the claims cannot rely on language that refers back to the drawings.
- Claim 1 recites "a set of rails of any type, ideally depicted on load bearing triple monorails." This language is indefinite because it is not clear whether applicant seeks to claim any type of rail or whether the specific type of load bearing triple monorails is claimed.
- The claim language "covered along the barrel end by mesh" is indefinite because there is no antecedent basis for "the barrel end" in the claim.
- There is no antecedent basis for the limitation "the seat tracks" in line 4 of claim 1.
- The limitation "box to which any seat *chassis or chassis'* can be mounted" is unclear due to the word "chassis'".

Application/Control Number: 10/645,044

Art Unit: 3641

- There is no antecedent basis for the limitation "the ejection monorails launcher platform legs" in line 7 of claim 1.

Page 7

- There is no antecedent basis for the limitation "the inner and supporting tracks" in line 14 of claim 1.
- As mentioned above concerning functional or operational language, the claims should be corrected to more clearly define the structural elements by what they are as opposed to what they do, such as the elements which cause the seat to be "guided out of the path of a failed aircraft during ejection", and what structure allows the sliding door panel to be "prevented from recoiling into the path of the ejecting occupant and device by a common latch."
- It is unclear what is meant by "dual airbags" in line 11 of claim 1.
- There is no antecedent basis in claim 1 for "the blast shield" in line 13.

Again, these examples are merely indicative of the type of issues that are present throughout the specification and the claims. A thorough examination and correction should performed on the entire application to bring it into compliance with the applicable rules as stated above. No new matter may be added.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- U.S. Patent No. 3,701,503 to Martin
- U.S. Patent No. 6,299,103 B1 to Shope et al.
- U.S. Patent No. 4,303,212 to Stone et al.
- U.S. Patent No. 3,623,683 to Bennett

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gabriel S. Sukman whose telephone number is (703) 308-8508 until April 4, 2005, and (571) 272-6883 thereafter. The examiner can normally be reached on M-F, 8:30-6:00, every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael J. Carone can be reached on (703) 306-4198. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
